7. CONCLUSIONS

1. INTRODUCTION

Military ships possess the necessary infrastructure to facilitate helicopter operations on board:

☐ Landing and take-off on the flight deck

☐ Refuelling either on the flight deck or within the hangar

1. INTRODUCTION

Smoke dispersion problem

Sensitive areas

- Flight deck.
- Communication antennae.
- Radars.
- Weapons systems.
- Command deck.

❑ Elimination of the emissions to ENSURE the SAFETY of HELICOPTER MANEUVERS !

7. CONCLUSIONS

2. SMOKE DISPERSION PROBLEM

V_x : velocity of the flow ($x = \infty, e$).
 ρ_x : density of the flow ($x = \infty, e$).
 μ_x : dynamic viscosity of the flow ($x = \infty, e$).
 D : funnel diameter.
 A : reference area.
 g : gravity.

WIND TUNNEL TESTS

Dynamic similarity between
scaled-model and real ship.

Parameters involved in the smoke dispersion problem:

- Momentum ratio between the main wind flow and the exhaust flow:

$$J = \frac{\rho_{\infty} U_{\infty}^2}{\rho_e v_e^2}$$

- Mass flow ratio between the main wind flow and the exhaust flow:

$$R_{FM} = \frac{\rho_e v_e D^2}{\rho_{\infty} U_{\infty} A}$$

- Buoyancy of the thermal plume:

$$R_{FP} = \frac{\Delta \rho g D}{\rho_{\infty} U_{\infty}^2}$$

- Reynolds number:

$$Re = \frac{\rho_{\infty} U_{\infty} A}{\mu_{\infty}} > 10^5 (\text{critical } Re)$$

7. CONCLUSIONS

3. INTA'S CAPABILITIES

☐ Smoke visualization

- By injecting smoke through the chimneys.
- Direct observation of the flow (photographs or video recording).

☐ PIV visualization

- Advanced experimental technique for flow velocity measurement (laser plane).
- No direct flow observation.
- Flow velocity contours (processing task).

☐ N°1 Low-Speed Wind Tunnel INTA

- Closed circuit.
- Elliptical test section 3 x 2 m².
- Maximum velocity 60 m/s.
- Turbulence intensity < 0.5 %.

4. SMOKE VISUALIZATION TECHNIQUE

➤ **Smoke injection:**
(Rosco Fog Machine 1900 model)

4. SMOKE VISUALIZATION TECHNIQUE

Commercial tests:

Scaled frigate model (1:50) built in wood and painted in red.

V_s : Vessel velocity. V_w : Wind velocity. β : Angle between V_s and V_w . V_r : Relative wind velocity. φ : Angle between V_r and V_s .

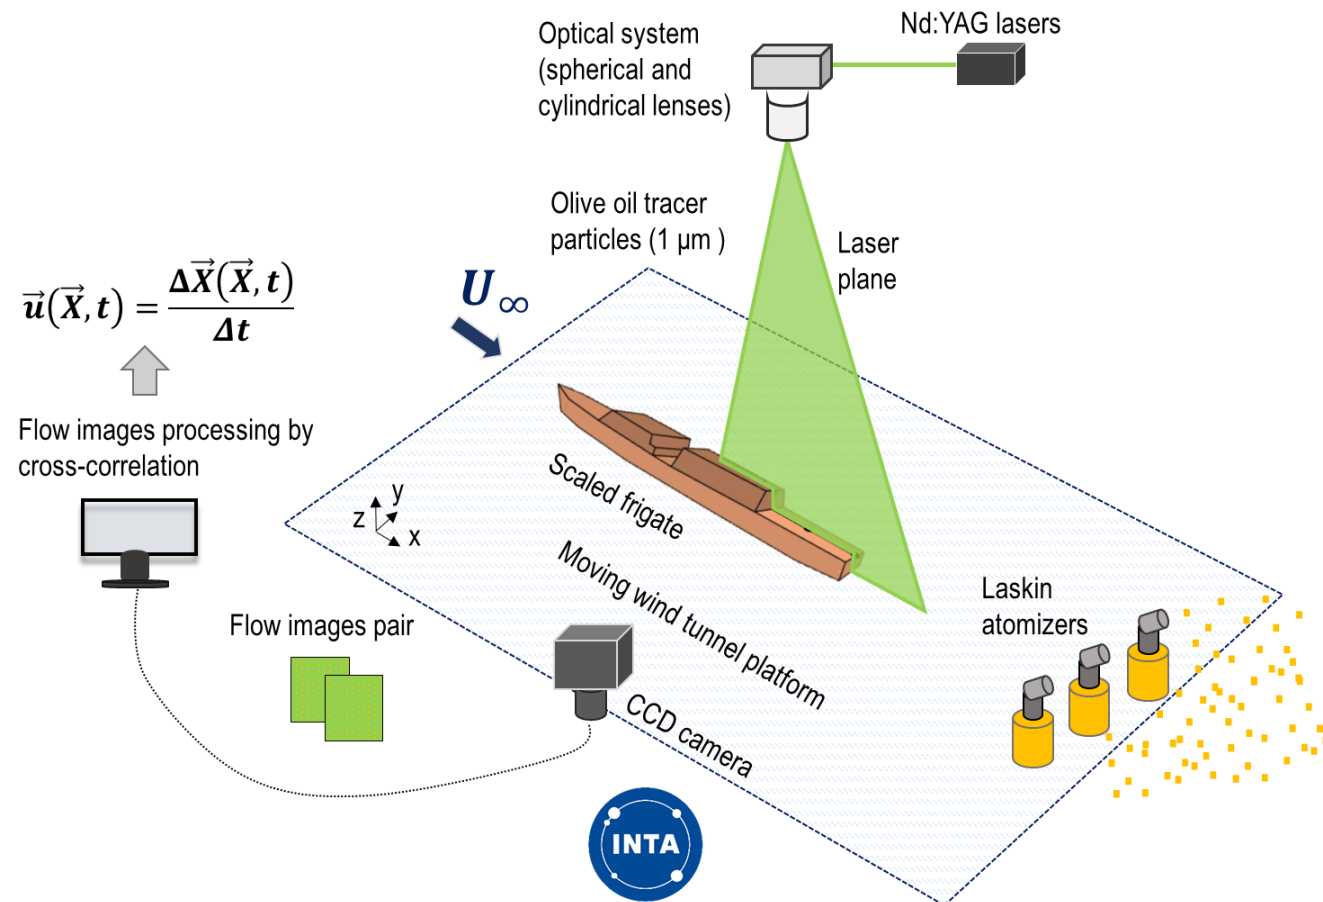

$$Re = 1.5 \cdot 10^6 > 10^5 (\text{critical } Re \text{ for blunt bodies}) \quad \checkmark$$

6. EXPERIMENTAL TESTS USING PIV TECHNIQUE
7. CONCLUSIONS

5. PARTICLE IMAGE VELOCIMETRY (PIV) TECHNIQUE

PIV characteristics

- ☐ Olive oil tracer particles of 1 μm.
- ☐ Two Neodymium-doped Yttrium Aluminium Garnet (Nd:YAG) lasers.
- ☐ Time interval of 25 μs.
- ☐ Laser pulse energy of 190 mJ.
- ☐ 100 pairs of flow images.

7. CONCLUSIONS

6. EXPERIMENTAL TESTS USING PIV TECHNIQUE

□ Research tests:

Simplified Frigate Shape (SFS2) (1:85), made of wood and painted in black.

Experimental set-up in the N°1 wind tunnel of INTA

$$Re = 1.1 \cdot 10^5 > 10^5 \text{ (critical } Re \text{ for blunt bodies)} \quad \checkmark$$

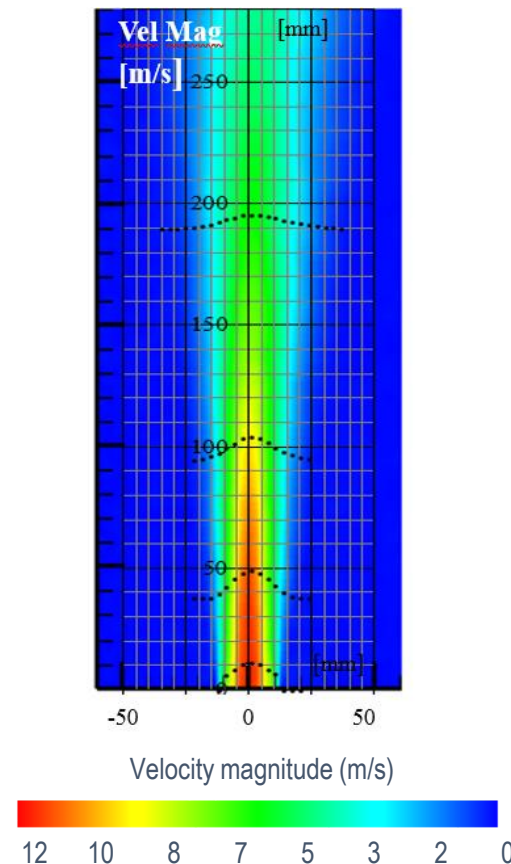

6. EXPERIMENTAL TESTS USING PIV TECHNIQUE

PIV instantaneous image

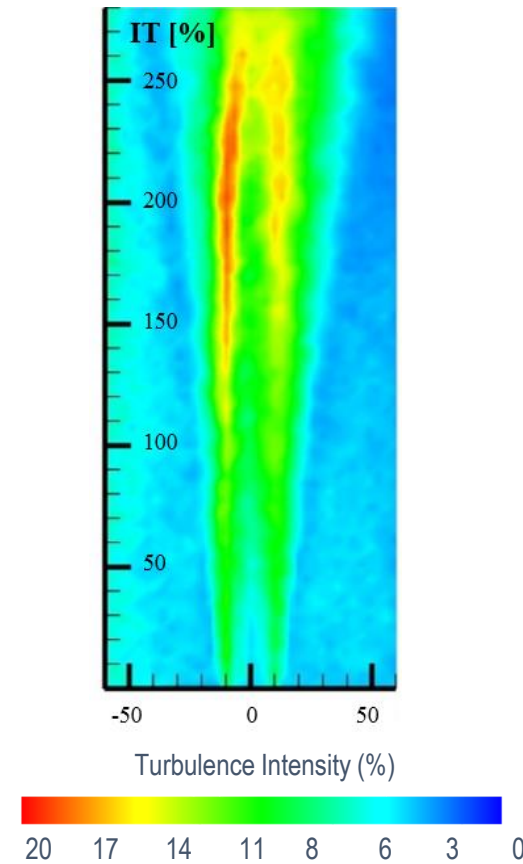

Isolated jet: No wind tunnel velocity .

PIV Velocity map

PIV Turbulence map

$$IT [\%] = \frac{\sigma}{u_{\infty}} \cdot 100$$

$$= \frac{\sqrt{\sigma_u^2 + \sigma_w^2}}{u_{\infty}} \cdot 100$$

- IT :Turbulence Intensity.
- σ_u : horizontal velocity fluctuation.
- σ_w : vertical velocity fluctuation

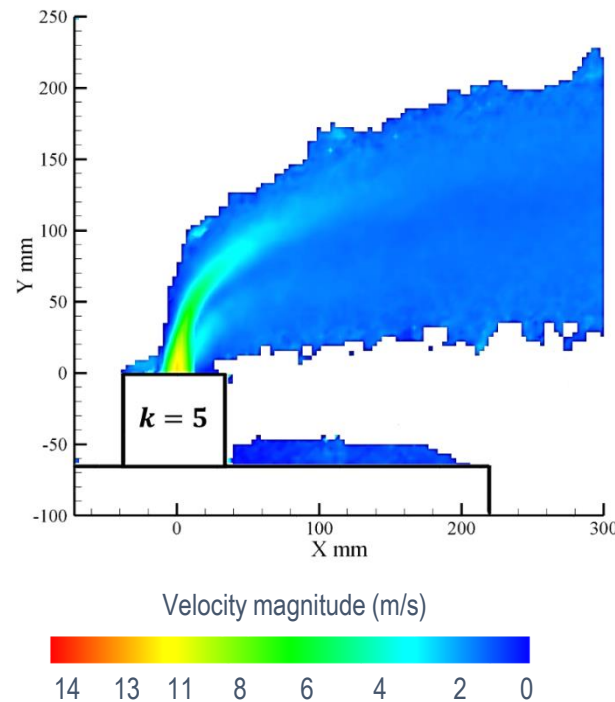

6. EXPERIMENTAL TESTS USING PIV TECHNIQUE

PIV instantaneous image

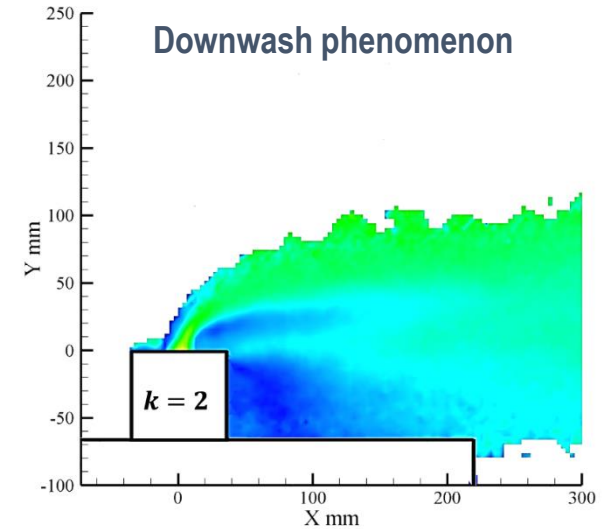

Cross flow: Wind tunnel velocity.
Olive oil tracer particles through the chimney.

PIV Velocity map

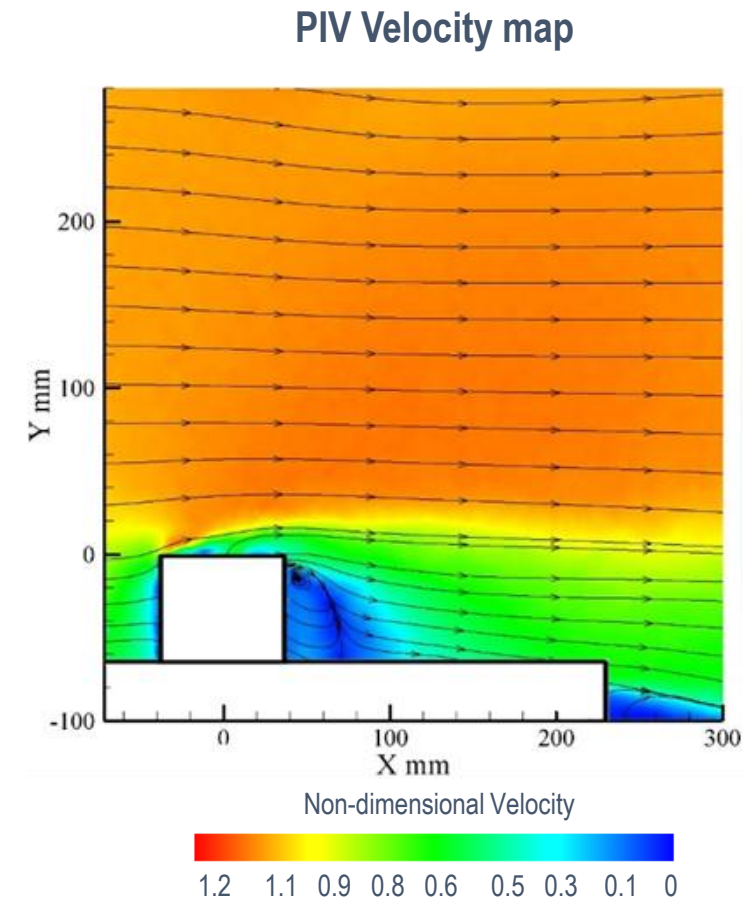

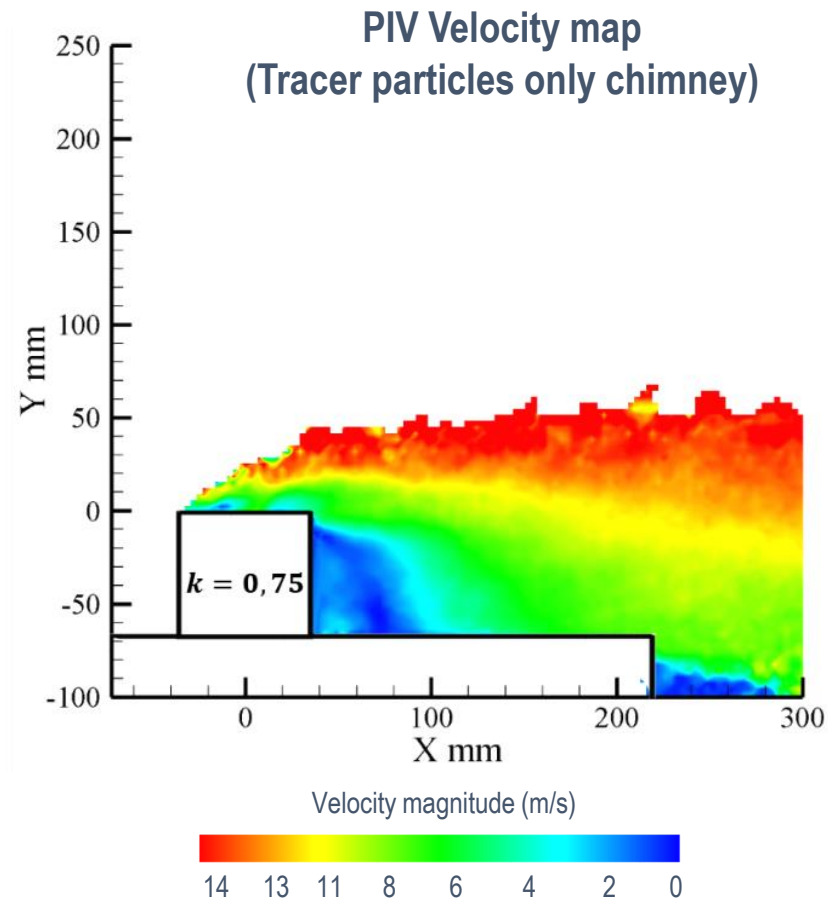

$$k = V_{jet} / U_{\infty}$$

k : Velocity ratio
 V_{jet} : Jet velocity (10 m/s)
 $U_{\infty} = 2$ m/s

6. EXPERIMENTAL TESTS USING PIV TECHNIQUE

7. **CONCLUSIONS**

7. CONCLUSIONS

FLIGHT DECK where helicopter operations take place, the ACCUMULATION of EXHAUST GASES can interfere with them.

Elimination of exhaust gases: SAFETY of helicopter maneuvers. ✓

➤ Experimental tests in the WIND TUNNEL to collect experimental data of the most critical regions.

Smoke visualization

Photographs or video: degree of visibility loss.

PIV technique

Instantaneous flow images, velocity and turbulence intensity maps.

INTA'S CAPABILITIES to effectively address the SMOKE DISPERSION PROBLEM on frigates.
